Argillite

*** All weights & coverages are approximate ***

* It is important to note that you may receive a percentage of stones that are smaller and/or larger than the stated range. This is the beauty of natural stone and adds character to the Montana stone pattern.

* For cleaning the stone it is recommended to use white vinegar or Detergent 600 according to manufacturer's instructions. Do not use acid.

McGregor Lake is quarried from a large rock formation in Northwest Montana. This quarry produces a highly attractive stone consisting of golds, browns and grey tones with exciting dendrite fern patterns.
